	Associated Certification Criteria:
	§ 170.315(c)(1) - Clinical quality measures (CQMs) — record and export

Measure Description:	**Justification:**	
• Capture and record electronic clinical quality measure (eCQM) data in EHR (or trading partner's EHR) for calculating eCQMs. • Electronically create a data file for transmission of CQM data in accordance with the CMS QRDA Category I IG for inpatient measures as adopted in § 170.205(h)(3) and CMS QRDA Category III IG for ambulatory measures as adopted in § 170.205(k)(3).	We chose to concentrate on the aspects of this criterion that would closely follow the actual activities of Empower users with respect to eCQM calculation and output: 1) Run quality measure reports and display results on Dashboard to compare with industry-standard benchmarks and with prior/expected performance. 2a) Generate eCQM output for PI/IQR (universal eCQM reporting program for hospitals) and ensure that it can be successfully uploaded to the PI/IQR website. 2b) Generate eCQM output for MIPS (the most widely-used eCQM reporting program for ambulatory) and ensure that it can be successfully uploaded to the Quality Payment Program (QPP) website. 3a) Verify that CQMsolution is a product that can support hospital quality reporting needs. 3b) Verify that CQMsolution is a product that can support MIPS participants in achieving an end-to-end reporting bonus.	
Metric Description: 1) 100 percent matching data elements in CQMsolution vs EHR. . This will be confirmed by visual validation of the following data: • Demographics • Problems • Medications • Allergies 2) 100 percent matching calculation results in CQMsolution vs submission environment 3) 0 percent of files uploaded to submission environment result in errors		**Standards Implemented:** • HL7 CDA® R2 Implementation Guide: Quality Reporting Document Architecture - Category I (QRDA I); Release 1, DSTU Release 3 (US Realm), Volume 1 - Introductory Material, June 2015
Developer Info: EmpowerSystems 1200 Harger Road - Suite 408 Oak Brook, IL 60523 877-674-5973 **Care Setting:** inpatient **Real World Testing URL:** https://www.empower.md/real-world-testing/	**Product Info:** Product Name: Empower Inpatient + Ambulatory Product Version: 1.1.57 **CHPL ID:** 15.04.04.2918.Empo.01.01.1.230726	**Methods Use to Demonstrate Interoperability:** • Visual inspection and matching of QRDA I data to EHR data • Matching of calculation results from CQMsolution to CMS • API Sandbox testing with CMS for file acceptance

Test Step:	Testing Procedure:	Expected Outcomes:	Key Milestone Date:	Key Milestone:	Outcome:	Comment(s)
	* Inpatient Setting					
1i	Identify Trading Partner (TP) and coordinate with TP for calculating and reporting electronic clinical quality measures (eCQMs) using production data as described in this RWT plan.	• Confirm Trading Partner • Confirm ability to calculate and report eCQMs • Confirm with TP that production data will be used, whether in an actual live environment or a copy of a live environment	Start test plan execution: May, 2024	FALSE	We've selected Maimonides Midwood Community Hospital for this RWT	
2i	Identify four EH (Eligible Hospital) eCQMs for RWT.	Based on historical data, select the most popular eCQMs.			We've selected cms71, CMS72, CMS104.	
3i	Identify a one calendar quarter reporting period with adequate patient data for reporting.	Admins with sufficient familiarity with the hospital's clinical activities should be able to choose a period with an appropriate amount of quality data.			1/1/2024-12/31/2024	
4i	Capture and record clinical quality measure (CQM) data in Trading Partner's (TP) EHR. Since manual data entry for an adequate quantity of data would be onerous, we will use actual patient data. a. If TP is integrated with CQMsolution, CQMsolution will capture data through a SQL query, so that when a user runs a CQM report, CQMsolution pulls data directly from the TP's database. b. Alternative approach: Pull in data through QRDA I files in a .zip folder	Data ready for report generation			All Data points were entered in Empower	
5i	Correctly calculate numerator, denominator, exclusion and exception values for selected eCQMs.	The CQMsolution report should complete with no errors.			CMS71 - IPP 178, Den 23, Excl 0, Num 22, Excep 0 CMS72 - IPP 178, Den 146, Excl 61, Num 60, Excep 0 CMS104 - IPP 178, Den 146, Excl 78, Num 57, Excep 0	
6i	Spot-check 10 patients for each measure, ensuring that some are in the denominator only, some are in the numerator and denominator and, if possible, some are exclusions or exceptions.	Use Patient List to check which categories Initial Patient Population (IPP), Denominator (Den), Exclusions (Excl), Numerator (Num) or Exceptions (Excp) each patient falls into. For each spot-check patient, use the drill-down to confirm that the patient data in CQMsolution (encounters, codes, demographics) matches the patient data in the EHR and that the patient is correctly categorized in CQMsolution.			All calculations look correct. Confirmed by complaince staff	
7i	Upload the generated zip files containing the HQR_PI_IQR QRDA I files to the HQR website test environment.	The file should upload and be accepted by the HRQ website without error.	August, 2024	FALSE	Files successfully uploaded to CMS.	

Attestation:
This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings.   All information in this plan is up to date and fully addresses the Health IT Developer's Real World Testing requirements.
